.com/ Those who believe that a video producer or ‘vlogger’ actually has “an opinion” about anything is just willfully ignorant and misinformed. It’s actually not uncommon for the political opinion of a “vlogger” to shift in a rather radical way. At least this is what is shown in the research I’ve compiled. It was also fascinating to discover how many of these “political opinion” shifts occurred in response to video game news! If you want to take this as a fun analysis of how the opinion of many “vloggers” are swayed by “fake news” and YouTube algorithm, that’s okay. Enjoy the videos and stay safe! Disclaimers The author and the host of the Recording Nerds podcast is not a “journalist”. These videos are published as an academic exercise in researching the history and the current interest in this area of the world. The opinions and analysis are those of the author. videos was created solely for educational purposes and not for any other use. No part of these videos may be reproduced or redistributed without written permission from the copyright holder.

Q: Aspx page - auto increment form label I have a search textbox which on click takes you to a seperate aspx page called result.aspx. When you click the results page, there is a button called show next result. This button should show the next result on a label called #lblResult. I'm currently able to show the first result ok, but the label #lblResult should increment like it does on my sql command Codebehind to result.aspx is:

```
Public Class Results Inherits System.Web.UI.Page Dim strConn As String = System.Configuration.ConfigurationManager.ConnectionStrings("StrSql").ConnectionString Dim strSql As String = "SELECT top 10 * FROM mp_lastuse WHERE TIMESTAMPDIFF(minute, mp_lastuse.timestamp, GETDATE())"
```
